

Second Edition

Chapter 1 Historical Context

Human-Computer Interaction

An Empirical Research Perspective

I. Scott MacKenzie

Timeline of Significant Events

Timeline of Significant Events

“As We May Think”

- Essay published by Vannevar Bush in *The Atlantic Monthly* in 1945¹
- Highly influential essay with 10,000+ citations on Google Scholar
- Reprinted in 1996 in ACM’s interactions (next slide)
- Bush was Director of the Office of Scientific Research under President Franklin D. Roosevelt
- It was 1945! Bush’s focus was on the possibilities that lay ahead in peacetime in applying science to more lofty and humane pursuits

¹ V. Bush, As we may think, *The Atlantic Monthly* 176 (1) (July 1945) 101–108, reprinted in the ACM’s *Interactions* (March 1996) 35–46.

memex

- To address “information overload,” Bush proposed *memex* → a detailed concept (never built)
- memex featured *associative indexing*, whereby points of interest are connected and joined so that selecting one item automatically selects another:
 - *When the user is building a trail, he names it, inserts the name in his code book, and taps it out on his keyboard*
- Sound familiar? (hypertext, World Wide Web)
- Bush’s inspiration for memex was... (review the article or see **HCI:ERP2e**)

Timeline of Significant Events

Sketchpad (1962) by Ivan Sutherland

Ivan Sutherland's Sketchpad is one of the most influential computer programs ever written by an individual, as recognized in his citation for the Turing award in 1988.¹

- *Sketchpad* was part of Sutherland's PhD research at MIT in the 1960s
- In Sutherland's words:

Heretofore, most interaction between man and computers has been slowed by the need to reduce all communication to written statements that can be typed. In the past we have been writing letters to, rather than conferring with, our computers.²

- *Sketchpad* → interactive graphics
- Input device: light pen
- Setup:

Next slide

Direct Manipulation

- Sketchpad features *direct manipulation*:
 - Visibility of objects
 - Incremental action and rapid feedback
 - Reversibility
 - Exploration
 - Syntactic correctness of all actions
 - Replacing language with action
- Term coined by Ben Shneiderman¹

¹ B. Shneiderman, Direct manipulation: a step beyond programming languages, IEEE Computer 16 (8) (Aug. 1983) 57–69.

Timeline of Significant Events

Invention of the Mouse

Doug Engelbart (1963)

- The mouse, above all other devices, defines the emergence of HCI
- Developed in the early 1960s by Doug Engelbart at SRI (Stanford Research Institute)
- Allows point-select operations with the user's arm moving and supported on a desktop rather than holding a light pen in the air in front of a display
- Patent filed in 1967, issued in 1970¹
- No commercial mouse until 1981
- First mouse: 

Next slide

HCI's First User Study¹

- A comparative evaluation of...

Mouse

Joystick

Lightpen

Grafacon

Knee-controlled lever

<http://ieeexplore.ieee.org>

¹ W.K. English, D.C. Engelbart, M.L. Berman, Display selection techniques for text manipulation, IEEE Transactions on Human Factors in Electronics HFE-8 (1) (1967) 5–15.

Experiment Design

- Participants: 13
- Independent variable
 - “Input method” with six levels: mouse, light pen, Grafacon, joystick (position-control), joystick (rate-control), knee-controlled lever
- Dependent variables
 - Task completion time, error rate
 - (Note: task completion time = access time + motion time)
- Within-subjects, counterbalanced
- Task:
 - Press spacebar, acquire device, position cursor on target, select target

Results (1)

Notes:

¹ Access time with the knee-controlled lever was zero (since the device is always “acquired”).

² Light pen use is fatiguing, since the user’s arm is held in the air in front of the display.

Results (2)

Timeline of Significant Events

Xerox Star (1981)

- Launched in Chicago at the 1981 NCC¹
- First commercially released computer system with a graphical user interface (GUI) and point-select interaction using a mouse
- Ground-up, new concepts; 10 years to develop
- Watershed moment in computing
- However, the Star was an expensive, closed,² network-based office computer (i.e., not personal)
- In the end, not successful
- The Star and its GUI: 

¹ NCC = National Computer Conference, 1981 attendance was 73,000.

² Closed → the Star could only run software developed by Xerox

Timeline of Significant Events

Birth of HCI - 1983

- Notable events:
 1. First ACM SIGCHI conference (1983)
 2. Publication of *The Psychology of Human-Computer Interaction* by Card, Moran, and Newell (1983)
 3. Apple *Macintosh* announced via brochures (December, 1983) and launch (January, 1984)

ACM SIGCHI Mission

The ACM Special Interest Group on Computer-Human Interaction is the world's largest association of professionals who work in the research and practice of computer-human interaction. This interdisciplinary group is composed of computer scientists, software engineers, psychologists, interaction designers, graphic designers, sociologists, and anthropologists, just to name some of the domains whose special expertise come to bear in this area. They are brought together by a shared understanding that designing useful and usable technology is an interdisciplinary process, and believe that when done properly it has the power to transform persons' lives.

“CHI” Conference Publications

Timeline of Significant Events

The Psychology of Human-Computer Interaction Card, Moran, and Newell (1983)

- From work at Xerox PARC (Palo Alto Research Center) in the Applied Information-Processing Psychology Project (AIP)
- AIP mission:
... to create an applied psychology of human-computer interaction by conducting requisite basic research within a context of application
- Emphasis on modelling (e.g., via the Keystroke-Level Model)
- Connects low-level human processes in experimental psychology to human interactions with computers

Stuart Card

Tom Moran

Allen Newell

The Model Human Processor

- Framework for analyses: Model Human Processor
 - Eye and ear → sensory input to perceptual processor
 - Brain → with a cognitive processor, short-term memory, long-term memory
 - Arm, hand, and finger → for motor responses
- Schematic:

Next slide

Model Human Processor

Example

- Problem:

A user is presented with two symbols, one at a time. If the second symbol is identical to the first, he is to push the key labeled YES. Otherwise he is to push NO. What is the time between signal and response for the YES case?

- Solution: (details in chapter 7)

$$\begin{aligned} RT &= t_P + 2 \times t_C + t_M \\ &= 100[30 \sim 200] + 2 \times (70[25 \sim 170]) + 70[30 \sim 100] \\ &= 310[130 \sim 640] \text{ ms} \end{aligned}$$

Modern Context

- Problem:
 - How long does it take to enter “computer” on a smartphone with word prediction/completion?

Timeline of Significant Events

Apple *Macintosh* (1984)

- Introduced on January 22, 1984, in a 60-second commercial aired during the 3rd quarter of Super Bowl XVIII¹
- The first *successful* system with a graphical user interface (GUI) and point-select interaction
- Inspired and influenced by the Xerox Star following Apple designers' attendance at the NCC in 1981 where they witnessed the revolutionary ideas in the Star
- The first “Mac”:

¹ The “Super Bowl” is the annual championship game of the National Football League in the U.S.

Apple *Macintosh* (1984)

MacWrite Software

Apple *Macintosh* Commercial (1984)¹

Click here

https://www.youtube.com/results?search_query=apple+macintosh+commercial+1984

¹ Directed by Ridley Scott, also known for feature films such as Blade Runner (1982) and Gladiator (2000).

Apple *Macintosh* Timeline

1976	April – Apple Computer Inc. founded in Cupertino, California.
1977	Launch of Apple II. Sells for \$1300 U.S. with 4KB RAM. Hugely successful (more than one million units sold). Works with a text-based command-line interface.
1978	<i>Lisa</i> project started . Goal of producing a powerful (and expensive!) personal computer.
1979	September – <i>Macintosh</i> project started. Goal of producing a low-cost easy-to-use computer for the average consumer. December – Apple and Xerox sign an agreement that allows Xerox to invest in Apple. In return Apple's engineers visit Xerox PARC and see the Xerox <i>Alto</i> . The GUI ideas in the <i>Alto</i> influence <i>Lisa</i> and <i>Macintosh</i> development.
1980	December – Apple goes public through initial public offering (IPO) of its stock.
1981	May – Xerox <i>Star</i> launched at the National Computer Conference (NCC) in Chicago. Members of the <i>Lisa</i> design team are present and see the <i>Star</i> demo. They decide to re-vamp the <i>Lisa</i> interface to be icon-based. August – IBM PC announced. Highly successful, but embodies traditional text-based command-line interface.
1982	<i>Lisa</i> and <i>Macintosh</i> development continue. Within Apple, there is an atmosphere of competition between the two projects
1983	January – <i>Lisa</i> released. <i>Lisa</i> incorporates a GUI and mouse input. Sells for \$10,000 U.S. In the end, <i>Lisa</i> is a commercial failure. December -- brochures distributed in magazines (e.g., <i>Time</i>) pre-announcing the <i>Macintosh</i> .
1984	January 22 – <i>Macintosh</i> ad plays during Super Bowl XVIII. January 24 – <i>Macintosh</i> released. Sells for \$2500 U.S.

Timeline of Significant Events

Growth of HCI (1983-...)

- Example of an early HCI research topic
 - Breadth vs. depth in menu design

SIGCHI-sponsored Conferences

First Year	In Short	Full Name
1983	CHI	Human Factors in Computing Systems
1988	UIST	User Interface Software and Technology
1988	CSCW	Computer-Supported Cooperative Work and Social Computing
1993	IUI	Intelligent User Interfaces
1994	VRST	Virtual Reality Software and Technology
1995	DIS	Designing Interactive Systems
1997	GROUP	Supporting Group Work
1999	C&C	Creativity and Cognition
2000	ETRA	Eye Tracking Research & Applications
2003	ICMI	Multimodal Interaction
2006	HRI	Human-Robot Interaction
2007	RECSYS	Recommender Systems
2009	EICS	Engineering Interactive Computing Systems
2009	ISS	Interactive Surfaces and Spaces
2009	UBICOMP	Pervasive and Ubiquitous Computing
2010	TEI	Tangible and Embedded Interaction
2012	MobileHCI	Human-Computer Interaction with Mobile Devices and Services
2013	SUI	Spatial User Interfaces
2014	IMX	Interactive Media Experiences
2014	CHI PLAY	Computer-Human Interaction in Play
2015	IDC	Interaction Design and Children
2017	AUTOMOTIVE	Automotive User Interfaces and Interactive Vehicular Applications
2018	CI	Collective Intelligence
2022	COMPASS	Computing and Sustainable Societies
2022	CUI	Conversational User Interfaces

HCI Research

- Research precedes products
- Consider...
 - Two-finger gestures (Apple *iPhone*, 2007)
 - Acceleration-sensing (Nintendo *Wiimote*, 2005)
 - Wheel mouse (Microsoft *Intellimouse*, 1996)
 - Single-stroke text input (Palm's *Graffiti*, 1995)
- Were these ideas born out of engineering or design brilliance? Not really...

- Two-finger gestures:

~~2007?~~

1978¹

- Acceleration-sensing:

~~2005?~~

1998²

- Wheel mouse:

~~1986?~~

1993³

- Single-stroke text input:

~~1995?~~

1993⁴
