Aim: Practising on the basics of C; using switch-case

1. Write a program that prints the following:

A	A^2	A^3
3	9	27
4	16	64
5	25	125
6	36	216

HINT: Use '\t' and '\n' in `printf();`

2. Write a program that reads an integer (between 1-12) and prints out the corresponding month name. If the user enters an integer less than 1 or greater than 12, the program will print "`Wrong entry`" message.

HINT: Use switch-case for selecting an operation

> **Sample output 1;**
>
> Please enter an integer: 2
>
> 2. Month of the year is February
>
> **Sample output 2;**
>
> Please enter an integer: 10
>
> 10. Month of the year is October
>
> **Sample output 3;**
>
> Please enter an integer: 35
>
> Wrong entry.
